

## CARBON FOOTPRINT REDUCTION POLICY OF PROCYON CONSTRUCTION S.A.

Powered by EcoReadyBath

# WELCOME TO PROCYON CONSTRUCTION - WHERE SUSTAINABILITY IS NEVER ACCIDENTAL.

We proudly present our Carbon Footprint Reduction Policy, developed in collaboration with our brand, **EcoReadyBath**.

As aware of the impact of our activities on the environment, we recognize the need to care for a better tomorrow. With determination, we take actions to reduce our carbon footprint and protect our planet for future generations.

As the **EcoReadBath** brand, we strive to lead by example in the construction industry, demonstrating that sustainable choices can drive positive change.

### CARBON FOOTPRINT REDUCTION FOR A SUSTAINABLE TOMORROW

This policy aims to create a program of action that support the protection of the natural environment.

Goal: to reduce the carbon footprint by 25% within five years.

As part of this policy, the Management has adopted a concept for reducing the carbon footprint based on the following actions:

#### **USE OF ECO-FRIENDLY MATERIALS**

- Utilization of low carbon footprint and sustainably sourced materials.
- Application of biodegradable or recyclable materials.
- Usage of materials with low volatile organic compound (VOC) content.

We are dedicated to reducing our carbon footprint by 25% within 5 years, paving the way for a greener and more sustainable future.

#### **EFFECTIVE WASTE MANAGEMENT**

- Implementation of waste segregation and recycling programs in the company.
- Optimization of production processes to minimize waste generation.
- Collaboration with local waste recycling or processing companies.

#### **OPTIMIZATION OF PRODUCTION PROCESSES**

- Usage of energy-efficient machines and equipment.
- Reduction of energy consumption through optimization of work schedules and efficiency.
- Implementation of ISO 50001 energy management system

## LIMITATION OF EMISSIONS IMPACTS IN TRANSPORTATION AND LOGISTICS

- Reduction of the distance between raw material deliveries and a production facility.
- Utilization of low CO2 emissions transportation.
- Optimization of logistic packages to decrease the number of transports

#### **ENGAGEMENT IN SUSTAINABLE DEVELOPMENT INITIATIVES**

- Investment in environment protection-related projects.
- Promotion of sustainable practices among contractors
